

Assignment 4

Global Health & Economic Data Analysis

Microsoft Excel Foundation
Prepared by: Sabbir Hossain

Dataset Overview

This assignment uses a **global health and economic dataset** to analyze healthcare expenditure, GDP, and life expectancy across countries and regions. The project demonstrates how Microsoft Excel can transform raw data into meaningful business and policy insights through charts, PivotTables, and comparative analysis.

Product B

Product C

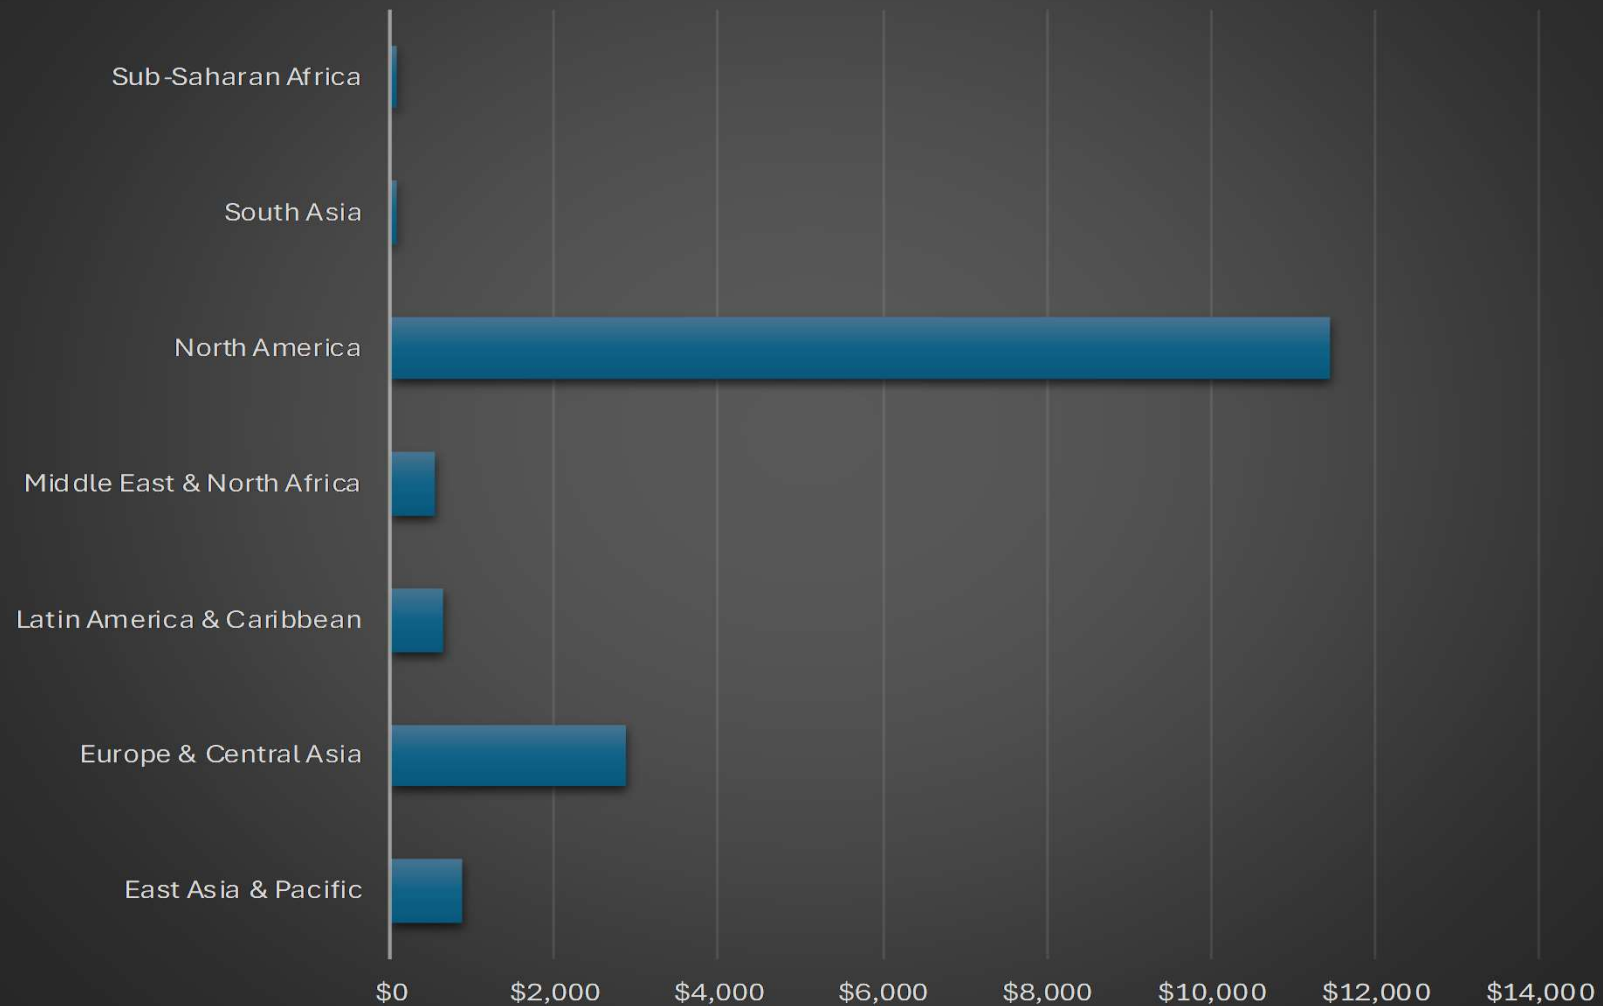

Product D

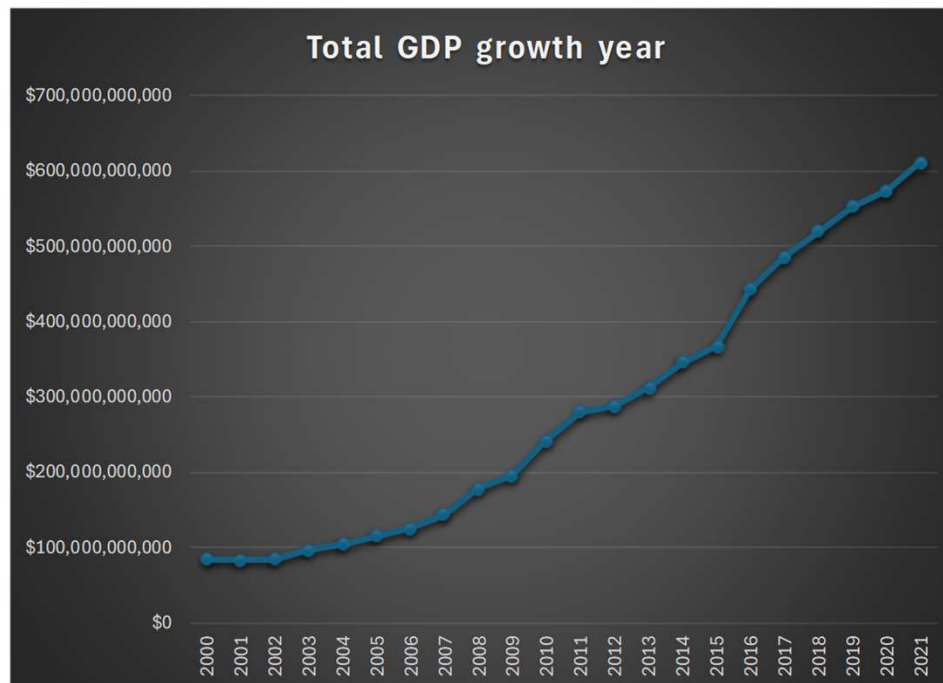

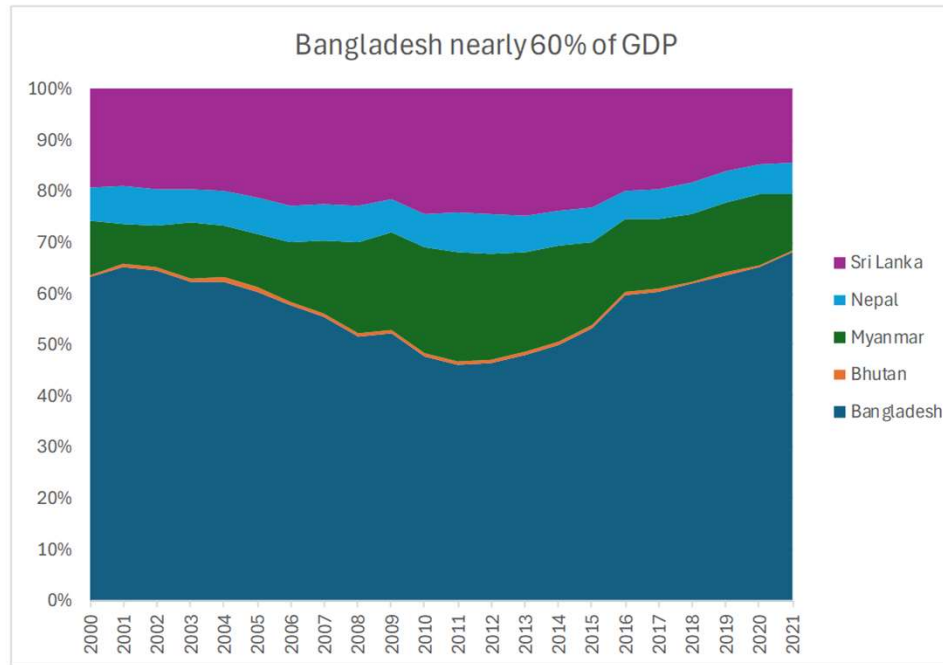

Basic Chart

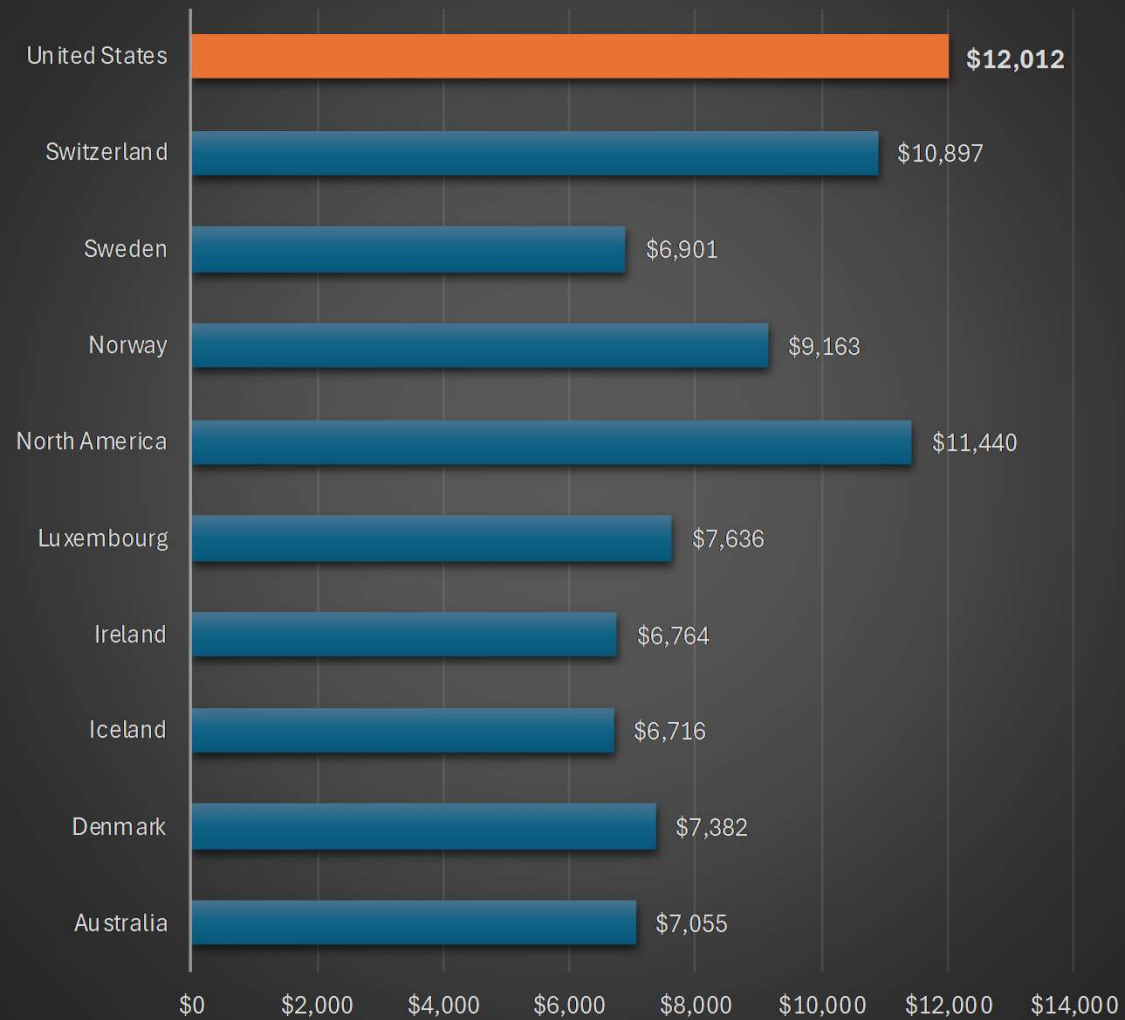

North America is the highest health expenditure per capital

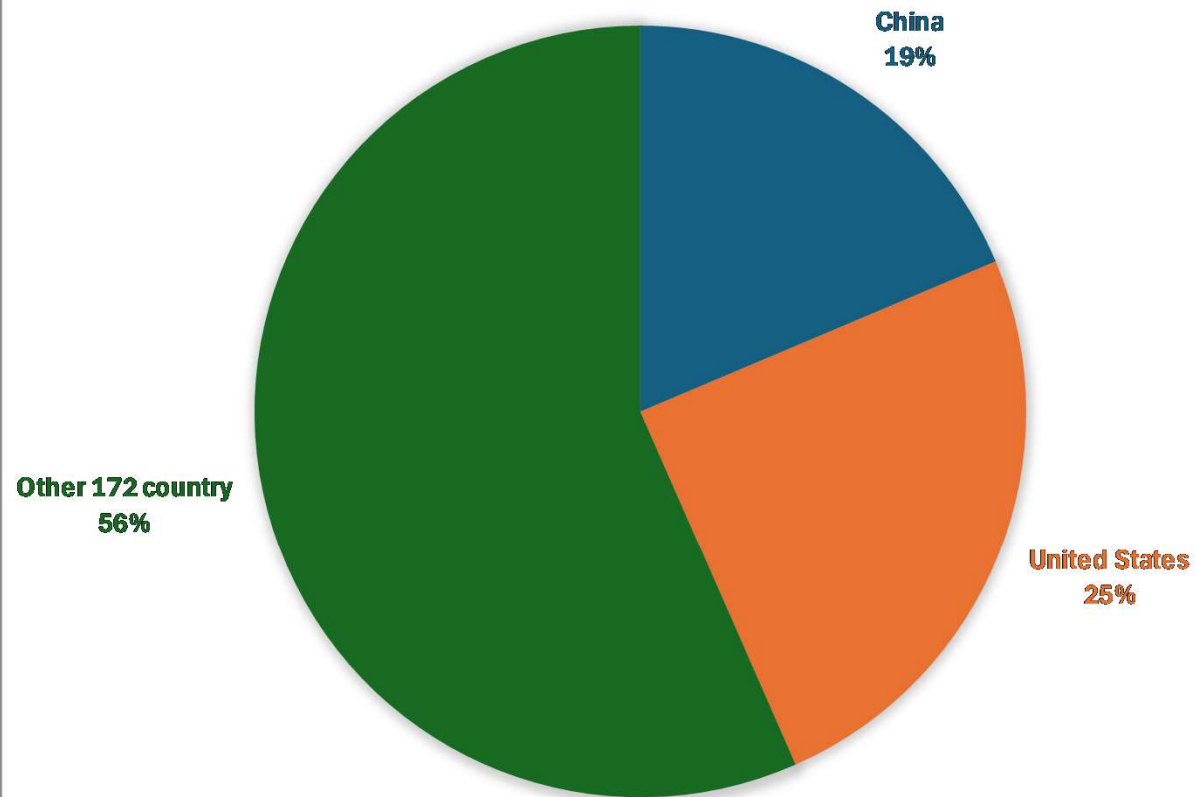

GPD near Country beside Bay of Bangal

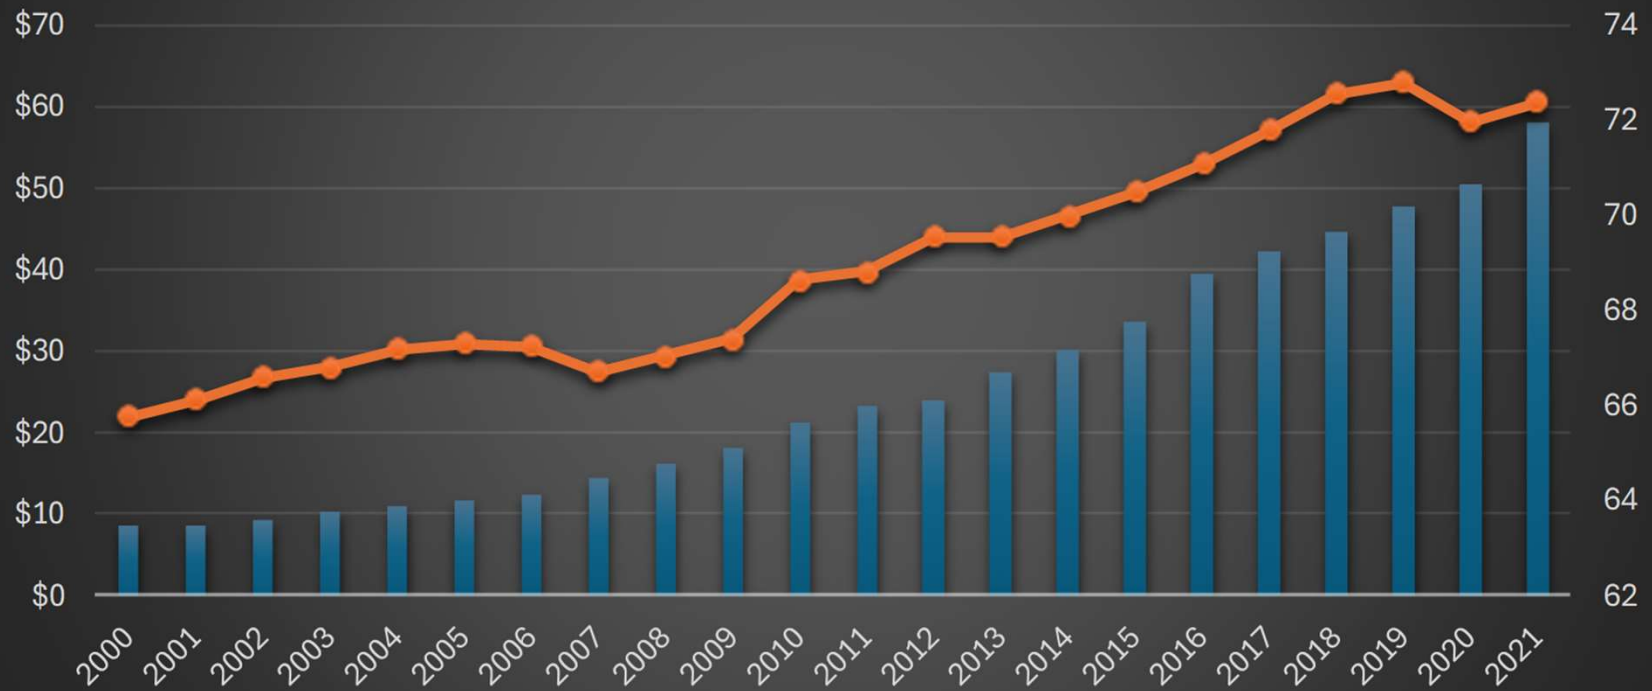

USA is the hight health expenditure

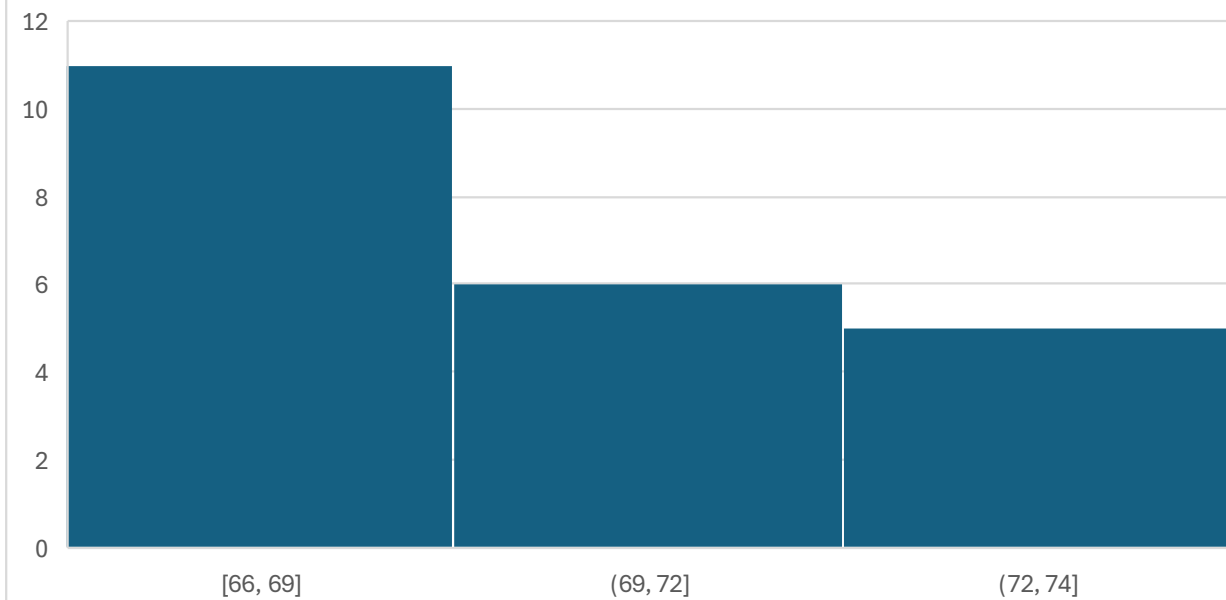

USA and China made of nearly half(44%) of GDP

Comparative Trends of Health Spending and Life Expectancy in Bangladesh

Most common life expectancy is 67

USA is the Highest Health Expenditure per Capita

This scatter plot displays the health expenditure per capita for 90 countries. The x-axis represents the country index (0 to 90), and the y-axis represents the expenditure in US dollars (\$0 to \$14,000). The USA is highlighted with a red dot at \$12,012, indicating it has the highest health expenditure per capita among the countries shown. Most countries have expenditures below \$2,000, with a few outliers reaching up to \$11,000.

Country Index	Health Expenditure per Capita (\$)
77	12012
84	10900
82	9100
81	7500
80	7000
79	6500
